

# Cablelink (Ethernet)

The Cablelink product suite is for Communications Provider customers using licensed facility within a BT operational building. It facilitates a connection between that space and your own network or between non-adjacent licensed facilities within the same BT operational building.

Enables connectivity to your own LLU/NGN backhaul circuits.

## Product benefits

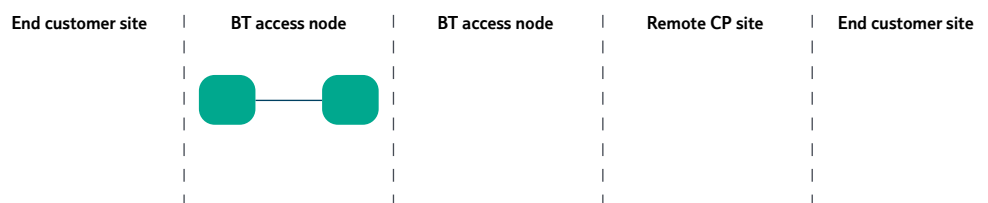

No additional space required

Cablelink uses direct fibre within the BT Exchange.

Future focused

Next generation network compatible.

## Connection capabilities

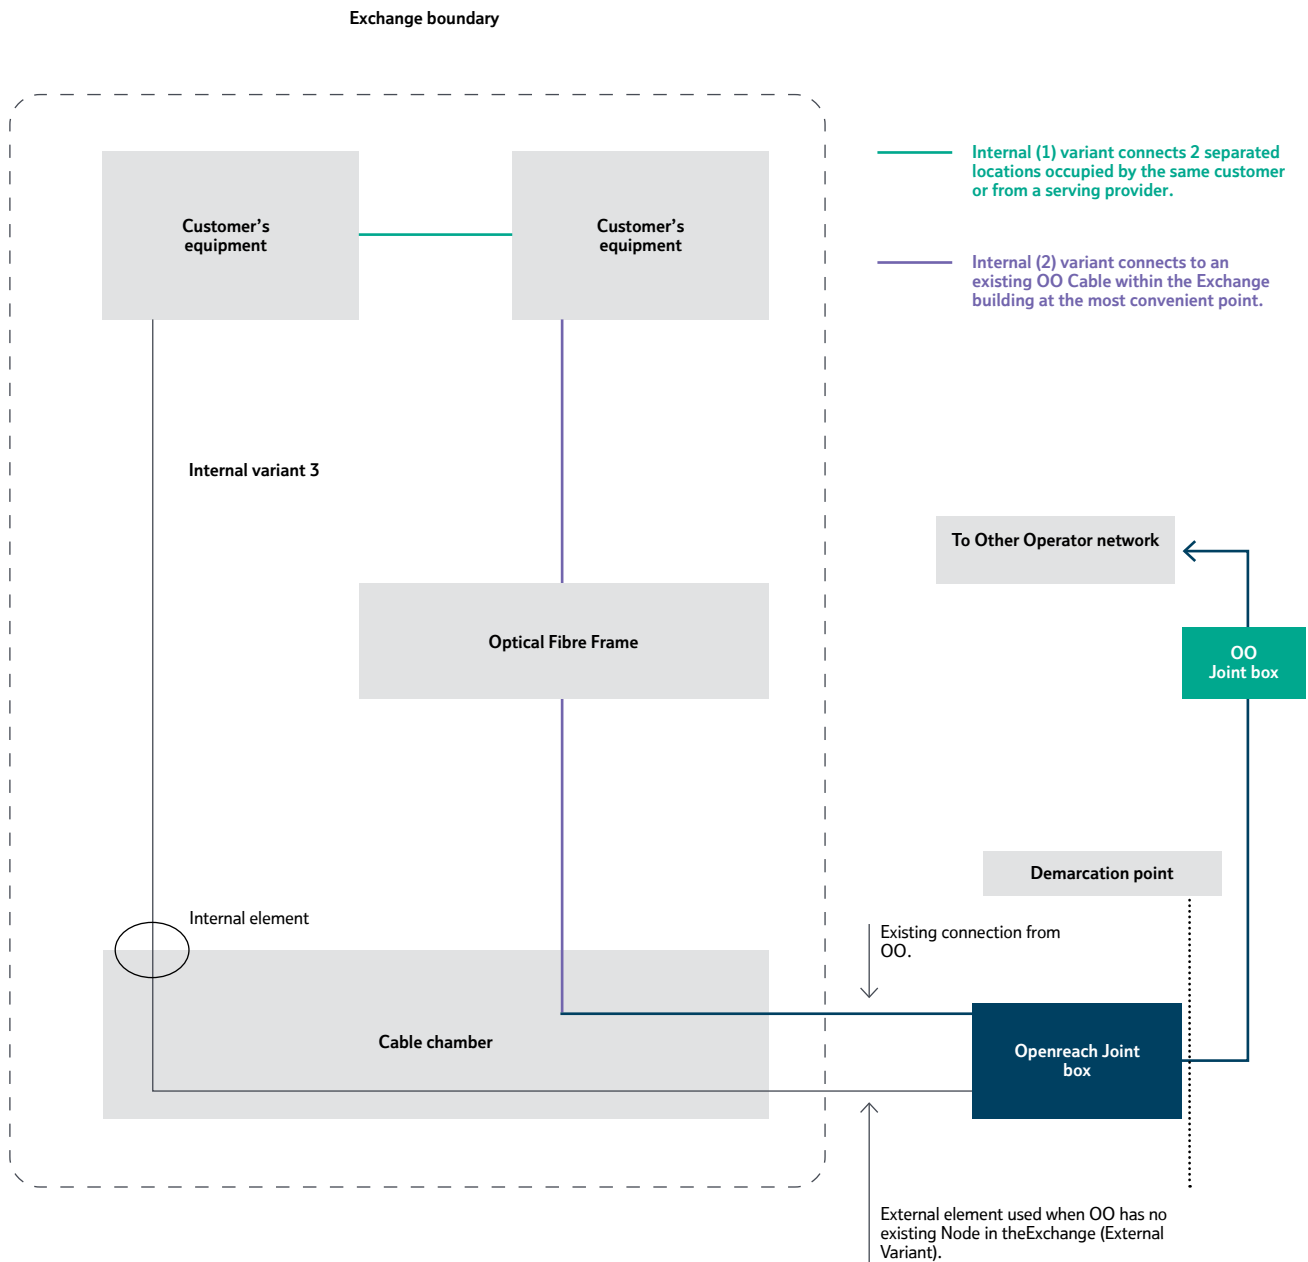

## Product features

- Available to CPs who hold licensed facility in a BT operational building
- Fibre connectivity is available exclusively for NGN connections
- An external variant is available. This is a pull-through service and consists of the following elements:
  - An internal fibre cable routed through the Exchange to the cable chamber
  - A CP's external cable pulled in from the point of hand over, (the "Openreach Handover box") to the cable chamber and spliced to the internal fibre.
- Three internal variants are available:
  1. Room to room – connects two licensed areas within an exchange
  2. Room to Openreach frame – connects CP equipment in an exchange to an optical fibre frame (OFF)
  3. Room to cable chamber – connects CP equipment in an exchange to an external cable at the cable chamber.

## How it works

The diagram shows the External and Internal fibre variants of Cablelink.
